

Product Communication

Type: EMEA Product Announcement
Number: EMEA-PM09-001
Date: 4th Febrary 2009
Subject: Intermec Client Pack (ICP) Now Available

Intermec announces availability of the new Intermec Client Pack version 1.00 (ICP) software bundle. The Intermec Client Pack provides both a data collection terminal emulator (Intermec Terminal Emulator) and a data collection and lockdown browser (Intermec Browser). These are designed for Intermec handheld computers and provide common clients across device architectures.

Intermec Terminal Emulator is the next generation of Intermec's popular terminal emulation client (formerly known as TE 2000). It incorporates and builds on the industry's best features for VT/ANSI, 5250, and 3270 emulation. Intermec Terminal Emulator main benefits are:

- Battery life improvements in the devices in which it is installed allowing them to run up to 25% longer than on the same battery capacity as the predecessor TE 2000 software
- Delivers scanning performance enhancements, allowing devices to scan from 35% to 637% faster (Comparing average scan times of each product over 100 scans of 10 groups of 10 Code 39 barcodes of 10 and 30 character length and PDF417 barcodes of length ranging from 100-1000) to start up and connect up to 47% faster (Each product was configured to connect to a host. Each product was then closed and re-launched. Time is from launch to when the host connection was made successfully), and process roundtrip transactions from 1.12 to 14 times faster than leading competitive software.

Intermec Browser is the next generation of Intermec's popular data collection browser (formerly known as iBrowse). Intermec Browser is a locked-down Web browser created for customers who wish to utilize web-based applications, but do not want to give complete access to the World Wide Web to users. Intermec Browser restricts user access to specified applications, Web sites and specified parts of the operating system. Users can only access authorized links provided on the "Home" page. With Intermec Browser, there is more control over program flow to create directed applications and remove any end-user confusion.

The two programs are licensed together as the Intermec Client Pack and will not be licensed separately (the license will allow you to run either or both). Intermec Terminal Emulator and Intermec Browser can be downloaded from the Intermec public web site. They will run for 60 days without a license before going into a "nag" demo mode. Buying and deploying a license will allow the downloaded software to run as a licensed product. Users with a current software maintenance agreement for TE 2000 can upgrade to the ICP for free under the terms of that agreement. The ICP is shipping now for the CK3. Additional mobile computers will be supported in the near future. Check the Intermec download Web site for updates on availability.

Order Information

The following part numbers will be appearing in the EMEA Q1 Price Guide:

Part Num	Description	Price - Euro (€)	Disc
Software v1.00			
454-023-001	via e-mail, therefore the License recipient's e-mail address must be provided for sales order processing.)	165.00	B
Software Maintenance			
ICP-SFT1	Intermec Client Pack Maintenance 1 YR (Customers must be on current version of Intermec Client Pack to subscribe to maintenance. Must purchase 1 maintenance contract per Intermec Client Pack client license. Entitles customer to technical support and all maintenance releases during contract per)	12.00	X
